The Acura RL is a mid-sized / executive luxury car that was manufactured by the Acura division of Honda for the 1996-2012 model years over two generations. The RL was the flagship of the marque, having succeeded the Acura Legend, and was replaced in 2013 by the Acura RLX. All models of the Legend, RL and RLX lines have been adapted from the Japanese domestic market Honda Legend.

A lane detection system used behind the lane departure warning system uses the principle of Hough transform and Canny edge detector to detect lane lines from realtime camera images fed from the front-end camera of the automobile. A basic flowchart of how a lane detection algorithm works to help lane departure warning is shown in the figures.

**Lane departure warning system - Wikipedia**

Why is reprogramming so important? 1. Automobile manufacturers are constantly making changes to their controller software – making cars more efficient, fixing problems that have been discovered, fine tuning components and systems, updating cut points as cars age, solving problems such as rough idle and hard starting, repairing emissions related problems and many others.
