On multi-engine aircraft, engine positions are numbered from left to right from the point of view of the pilot looking forward, so for example on a four-engine aircraft such as the Boeing 747, engine No. 1 is on the left side, farthest from the fuselage, while engine No. 3 is on the right side nearest to the fuselage.

Since turbine ignition systems are operated for a brief period during the engine-starting cycle, more trouble-free than the typical reciprocating engine ignition system. Continuous ignition is used in case the engine was to flame out. This ignition could relight the fuel and keep the engine from stopping. Gas turbine engines equipped with a high-energy, capacitor-type ignition system and are ...

Engine performance parameters 2.1 The definition of thrust One might be surprised to learn that there is no direct way to determine the thrust generated by a propulsion system. The reason for this is that the flow over and through an installed engine on an aircraft or an engine attached to a test stand is responsible for the

Builders, A friend of ours sent in a question on oils, which was sparked by reading an internet discussion group story about "experimenting" with oils for Corvair flight engines. It is a free world and people can do as they wish, but to my perspective, the subject of oil for Corvair flight engines is very simple....

Subject: Aircraft Engine Modeling; Turbojet engine. All aircraft engines are Heat Engines, in that they use the thermal energy derived from combustion of fossil fuels to produce mechanical energy in the form of kinetic energy of an exhaust jet. The excess of momentum of the exhaust jet over that of the incoming airflow produces thrust.
