This is the project I have been working on for the past few weeks. It is a 20 lbs thrust pulse jet engine with 32 real Argus type valves. This it a small version of the German V1 buzz bomb engine. I had to build my own test equipment so I could test valves to make sure they would work. I had to make several mill and drill fixtures too. Here is the finished engine.

Perhaps the most famous, or should that be infamous, pulsejet engine of all time is the huge unit designed by Schmidt and built by Argus in Germany for their V1 flying bomb. This engine was a masterpiece of simplicity and heralded in the dawn of what we now know as the cruise missile or unmanned aerial vehicle (UAV).

A pulsejet engine (or pulse jet) is a type of jet engine in which combustion occurs in pulses. A pulsejet engine can be made with few or no moving parts, and is capable of running statically (i.e. it does not need to have air forced into its inlet typically by forward motion).. Pulsejet engines are a lightweight form of jet propulsion, but usually have a poor compression ratio, and hence give a ...

The pulse jet engine works because it uses the dynamic pressure of air for compression. Consequently, it needs speed to work well. If the pulse jet is on the ground, it is not easy to start - it needs to be fed with compressed air, and once it runs (it can run even when not moving because the oscillating pressure wave inside the tube will compress the inflowing air), it develops litte thrust.
