### **Manatee Diagram**

The skin of a manatee is very thick and it is wrinkled, similar to that of an elephant. This is why many people often mistake young manatees for older ones. They assume the wrinkled skin is a sign of aging but it is simply part of their overall anatomy. Many assume that the large sized manatee has blubber like seals and whales.

These jointed "finger bones" allow manatees to maneuver through the water, bring food to their mouths, and even hold objects. Three or four nails are found at the end of each flipper, allowing for protection and better grip. As you can see in the diagram, manatees possess pelvic bones, although they are unattached from the rest of their skeleton.
