### **What are Example of technology that use megabyte money?**

A Gigabyte is 1000 Megabytes. Many people will tell you that it's 'actually 1024' —they are wrong, however it is true that many people use the terms Kilobyte, Megabyte, Gigabyte to refer to multiples of 1024.This is incorrect and came about due to the fact the computer hardware is normally built to sizes using binary powers (this is where 1024 comes from).
