Genetics is a branch of biology concerned with the study of genes, genetic variation, and heredity in organisms.. Gregor Mendel, a scientist and Augustinian friar, discovered genetics in the late 19th-century.Mendel studied "trait inheritance", patterns in the way traits are handed down from parents to offspring. He observed that organisms (pea plants) inherit traits by way of discrete "units ...

The Domestication Process. Most researchers believe that agriculture began as an attempt to modify the landscape and thereby encourage the growth of edible wild plants at the expense of less useful ones (Smith, 1998). Among hunter-gatherers such as the Australian Aborigines, burning of native vegetation was practiced because species of grasses favored as food thrived after the burning.
