The AC system has many key components: compressor, condenser, receiver dryer, evaporator, and hoses. For an AC system to work, it needs a gas or liquid substance called refrigerant (R-12 in older

cars, R-134a in 1995 and newer cars). The job of an AC condenser is to convert the AC gas into a liquid form by cooling it.

Mercedes-Benz C300 AC Condenser Replacement Costs

One of the key components of the A/C system is the compressor. Compressor's purpose is to add pressure to the system by taking the refrigerant and compressing it. The operation of the A/C in your car is based on the First Law of Thermodynamics if you wanted to learn the physics behind it. From the compressor the fluid goes to the condenser.

Whatever oil you put in the compressor before installing it will be coming out as soon as you install it and remove the plugs. It is best to add oil through the suction hose after you have the manifold attached. Add only a few ounces in the suction side and the rest in the other parts of the system. You don't want to hydrolock the compressor.
