Proper physiological functioning depends on a very tight balance between the concentrations of acids and bases in the blood. Acid-base balance is measured using the pH scale, as shown in Figure 1. A variety of buffering systems permits blood and other bodily fluids to maintain a narrow pH range, even in the face of perturbations.

Carbon has four valence electrons $2s^2 2p^2$ and it must either gain four electrons or lose four electrons to reach a rare-gas configuration. The electronegativity of carbon is too small for carbon to gain electrons from most elements to form C^{4-} ions, and too large for carbon to lose electrons to form C^{4+} ions. Carbon therefore forms covalent bonds with a large number of other elements ...
