Custom Column Types & Default Values¶. Some DBMS systems provide additional column types and default values that are specific to them. If you don't want to keep your migrations DBMS-agnostic you can use those custom types in your migrations through the \Phinx\Util\Literal::from method, which takes a string as its only argument, and returns an instance of \Phinx\Util\Literal.

A database cluster is a collection of databases managed by a PostgreSQL server. If you hear this definition now for the first time, you might be wondering about it, but the term 'database cluster' in PostgreSQL does not mean 'a group of database servers'. A PostgreSQL server runs on a single host and manages a single database cluster.
