Equilibrium chemistry is concerned with systems in chemical equilibrium. The unifying principle is that the free energy of a system at equilibrium is the minimum possible, so that the slope of the free energy with respect to the reaction coordinate is zero. This principle, applied to mixtures at equilibrium provides a definition of an equilibrium constant.

I. Introduction. Starch is the major component of human diet and is also used for many food and nonfood/industrial applications (Gaillard, 1987, FAO, 2006a). A significant quantity of starch is further processed by subjecting it to various forms of chemical and physical modifications, resulting in starches with even greater functionality attributes (Zobel, 1992).
