During the process of meiosis which creates eukaryotic sex cells, the sex cells “remix” DNA between their two copies of each autosome in the process of crossing over. The result is a unique set of chromosomes which has a mix of material from both of the individual’s parents. This process is illustrated below.

(a) What can you say about inviable? Is there anything odd about its position? Show, or briefly explain, how you arrived at your answer. As the name implies, inviable seems to be lethal. This is evidenced by the recovery of large numbers of the inv + parental chromosomes (Bar phenotype) and very few of the Yellow phenotype expected for the other parental inv chromosome.

Genetics is concerned with explaining how some characteristics are passed from generation to generation, i.e. heredity, or inheritance. However, it is important to firstly deal with some background information about the characteristics themselves. This may then be tied in with evolution and the development of different species of living organisms. See also notes on classification, chromosome ...
