A right triangle is triangle with an angle of 90 degrees ( $\pi/2$  radians). The sides  $a$ ,  $b$ , and  $c$  of such a triangle satisfy the Pythagorean theorem  $a^2+b^2=c^2$ , (1) where the largest side is conventionally denoted  $c$  and is called the hypotenuse. The other two sides of lengths  $a$  and  $b$  are called legs, or sometimes catheti. The favorite A-level math exam question of the protagonist Christopher in ...

Note again that when we solve these types of trig problems, we always want to solve for the General Solution first, and then go back and see how many solutions are on the Unit Circle (between 0 and  $2\pi$ ).. Factoring to Solve Trigonometric Equations. Note that sometimes we have to factor the equations to get the solutions, typically if they are trig quadratic equations.

We use the Law of Sines and Law of Cosines to "solve" triangles (find missing angles and sides) when we do not have a right triangle (which is called an oblique triangle). This is a little more complicated, and we have to know which angles and sides we do have to know which Law to use, but it's not too bad.. Note that the Law of Sines can still be used to solve Right Triangles, using the ...
